

## Obituary

---

Associate Professor Christer Slotte has passed away at the age of 61. Christer Slotte was a dentist and specialist in Periodontology. He defended his thesis at the Sahlgrenska Academy in 2003, which presented a series of basic, experimental studies of so-called guided tissue healing, particularly guided bone regeneration. He was responsible for the achievement of a highly successful specialist training and research structure at the Department of Periodontology at the Institute of Odontology in Jönköping. In collaboration with the Sahlgrenska Academy, he worked on several research projects, based on clinical challenges and processed with modern cellular and molecular biology methods. The projects focus on dental health in different age groups, periodontitis and gingivitis, tissue loss and strategies for implants and other therapies used to recover a damaged tissue structurally and functionally. The funeral takes place, Friday, March 11 in Jönköping.
